

Fresh Aero Stainless Steel Tiedown Eye Bolts for Cessna

Important Mounting Notes

Thank you for purchasing our stainless steel tiedown eye bolts for your Cessna. These eye bolts have been tested to over 2000 pounds tensile strength with no deformation, stretch or indication of impending failure. They are strong!

That said, stainless steel threads will load up and gall if they are “bottomed out” or torqued beyond their thread length. When this happens, they are very difficult to remove.

When installing these bolts, apply a light lubricant to the threads and do not turn the nut past the threaded portion of the shank or “bottom out” the tail eye bolt . If resistance is felt when turning the nut or the bolt (other than the resistance of the Ny-Loc lock nut) before the eye bolt is tight, remove the nut/bolt and add additional spacer washers until the eye bolt tightens.
